

HUSH SYSTEM HDC

SPECIFICATION

- Hush-Panel 28, all T&G joints glued using Hush-Bond, with all perimeters sealed using Hush-Seal 20, laid over 200mm in situ concrete slab (400 kgs/m²).
- Timber battens fixed to the underside of the concrete at required centres.
- One layer of 12.5mm Gyproc Soundbloc or Fireline plasterboard secured to the timber battens. Seal all perimeters prior to skimming.

Ceiling system may need to be upgraded if the density of the structure is not as required

FEATURES

- ✓ Complies with UK Building Regulations Approved Document E (England & Wales), Part G (Northern Ireland) and Section 5 (Scotland).
- ✓ A fully developed economical sound insulation system between separating floors
- ✓ For use in new build, conversion or refurbishment projects based on concrete structures at 400 kg/m² minimum.

ACOUSTIC PERFORMANCE

Impact L' _{nT,w} dB	Airborne D _{nT,w} dB	Airborne D _{nT,w} + C _{tr} dB
57	55	48

Results based on the full Hush System HD1007 being used in conjunction with concrete structures at the specified density.

BUILDING REGULATIONS STATEMENT

- Approved Document E (England & Wales) incorporates a unit of measurement to determine low frequency airborne sound transmission. Due to proven intrinsic difficulties of measuring low frequency sound, in domestic sized rooms, it must be expected that there could be significant deviations in the accuracy of these measurements.
- There will be variations in measurements from site to site in all UK Building Regulations whether it be Document E (England & Wales), Section 5 (Scotland) or Part G (Northern Ireland). These variations are caused by structural differences in buildings, general site conditions and workmanship.
- All these factors can influence the repeatability of both impact and airborne acoustic test results. Therefore, any test results must be considered as an indication only and no warranty can be given or implied as to the actual acoustic performance in any particular situation.
